

1 – The Organisation in its overall activity achieves carbon offset through a tree planting programme. The company history of timber trade association enables this programme to be both effective and exciting.

2 – The **weltestone** project reflects the vision that every attempt should be made to minimise imports especially of non environment friendly material such as polished granite and particularly when exported from the opposite side of the globe and produced by nations which may pay less attention to environmental issues and also may lack some transparency in employment controls.

3 – The solution is the creation of **weltestone** and products manufactured locally from local indigenous quarried material by directly employed and managed labour.

welters use their best endeavours to persuade their clients and specifiers to utilise products and systems from the **weltestone** range as opposed to non eco-friendly imported material. A range of finishes and permeable gradings are available and compression strengths of 65 newtons are common.

welters Environmental Pledge – where memorials or interment systems are being sold, one tree will be planted for every memorial or interment. In all other cases, one tree will be planted for every 1 tonne of material supplied.

welters continue to improve the environment of our planet.

Internal discussions are taking place at the moment to examine the potential for the company to double its investment in environmental offsets by considering planting 2 trees per tonne. This will be revealed in the press in the coming months.
